WATER CONSERVATION & CARBON FOOTPRINT...

Drought Preparedness and Water Conservation

Last Update: March 9, 2009

To address current drought and water shortage problems (see the [Governor's February 2009 Proclamation](#) and the June 2008 [Executive Order](#) and [Central Valley Emergency Proclamation](#)) and the Governor's goal of achieving a 20 percent reduction in per capita water use statewide by the year 2020 (see [February 2008 press release and letter](#)), CDPH's Division

Use of tire derived products for landscaping & ground cover applications reduces water consumption and carbon footprint!

CARBON FOOTPRINT:

Every event or product - even every one of us - produces a carbon footprint. A carbon footprint equates to the production of greenhouse gases. Our responsibility is to reduce the carbon footprint as much as possible.

Wood Bark

Rubber Bark
The use of Rubber Bark over the more traditional wood bark can reduce the carbon footprint by as much as 95%.

Up To:
95% SMALLER

The infographic features a large black footprint on the left labeled 'Wood Bark' with a vertical double-headed arrow indicating its height. To its right is a smaller black footprint labeled 'Rubber Bark'. Below the rubber bark footprint is a very small footprint with a vertical double-headed arrow and the text 'Up To: 95% SMALLER' next to it.

WHY IS RMDZ A GREAT PARTNER...

- ✘ How we got our start...
- ✘ Funding opportunities
- ✘ Ongoing support with Cal Recycle

*Success these days is a team
effort!*

WHAT IS YOUR ROLE?

AS A GENERATOR... AS A CONSUMER...

- ✘ Be sure your tires are being recycled!

Not all tire haulers or tire facilities actually RECYCLE your tires, some are shipped overseas and/or land filled!

- ✘ Buy recycled tire products!!

Asphalt Rubber

Rubber Bark™ for playgrounds/landscapes

Mats for Industrial/Ag Use

Artificial Turf Fields

Tire Derived Aggregate for CE projects

- ✘ Spread the good news...

Thank you!

Are your tires being recycled?
